- TypeScript

Awesome for beginners

PHP

- phpMyAdmin *(label: newbie)*
  Admin interface for MySQL written in PHP.
- Deployer *(label: good for begin*
  A deployment tool written in PH
- Matomo *(label: help wanted)*
  Matomo is the leading Free/Lib
- OrgManager *(label: beginners-*
  Supercharge your GitHub orga
- PHP Censor *(label: good-for-b*
  Open source self-hosted conti
- Drupal *(label: N/A, link to exter*
  Leading open-source CMS for
- Symfony *(label: good first issue*
  Symfony is a PHP framework fo
- Laravel Newsletters *(label: goo*
  A package that provides an eas
- Appwrite *(label: good first issue*
  An End-to-end backend server

Rust

- Servo *(label: E-easy)*
  A browser engine designed for applications including embedded use.
- Rust-Clippy *(label: good first issue)*
  A bunch of lints to catch common mistakes and improve Rust code
- Rustfmt *(label: good first issue)*
  A tool for formatting Rust code according to style guidelines.
- Iron *(label: easy)*
  An extensible, concurrent web framework for Rust
- TiKV *(label: D: Easy)*
  A distributed transactional key-value database
- nushell *(label: good first issue)*
  A modern shell for the GitHub era written in Rust.
- Hyper *(label: E-easy)*
  A fast, safe and correct low-level HTTP library for Rust.

code quality A | PRs welcome | license MIT | build passing | codefactor

all_of

Description : This function operates on whole range of array elements and checks for a given property on every element and returns true when each element in range satisfies specified property, else returns false.

Example :

```
int main() {

        std::vector<int> v{10, 2, 4, 6};

        if (std::all_of(v.begin(), v.end(), [](int i){ return i % 2 == 0; })) {
                std::cout << "All numbers are even\n";
        }
    else{
        std::cout << "All numbers are not even\n";
    }
}
```
